

WeedSeeker 2 at your place

- ▶ Weed mapping and section control
- ▶ Automatic turn compensation
- ▶ Expanded detection width means fewer sensors
- ▶ ISOBUS compatible
- ▶ Retrofit your existing boom

Want to see the future of chemical savings and weed control in action? In your own paddock?

Contact the Ramsey Bros Integrated Technologies team for a demo.

WeedSeeker 2 is the next generation spot spray system from Trimble Agriculture, backed by 25 years of weed killing experience.

The WeedSeeker 2 system uses advanced optics and processing power to detect weeds under the spray boom and precisely apply herbicide where it's needed.

The result is chemical – and cost – savings of up to 90 percent.

See it in action on our ute-mounted rig.

Do more with less

WeedSeeker 2 brings growers a step change in precision spot spraying. Ideal for targeting hard to kill and resistant weeds, WeedSeeker 2 can be retrofitted to most sprayer booms, or ordered ready-to-spray on Stoll Boomsprays.

ISOBUS COMPATIBILITY

Use whatever ISOBUS compatible display you already own to monitor and control your WeedSeeker 2 installation.

BUILT-IN TURN COMPENSATION AND SECTION CONTROL

Each sensor knows its position on the boom and constantly monitors boom speed – automatically adjusting their spray timing during turns and switching off to ensure you don't respray sections that have already been treated.

WIDER COVERAGE FROM LIGHTER SENSORS

Lighter sensors mean the largest booms can carry a Weedseeker 2 system without bracing, while expanded sensor coverage enables industry standard nozzle spacing of 50cm.

AUTOMATIC WEED MAPPING

WeedSeeker 2 logs every weed sprayed, so you can identify problem areas, review detailed maps before you next spray, and quickly see if resistant weeds are spreading in your paddock.

INTELLIGENT SENSORS

After a quick calibration at power on, the WeedSeeker 2 sensors automatically adjust to changing temperature, ambient light and backgrounds like soil or stubble on the run, to save you time on accurate weed targeting under a wide range of conditions

REDUCE HERBICIDE USE BY UP TO 90%

Precision, intelligence and flexible retrofit options means you can target weeds more accurately and use up to 90% less herbicide per paddock.
